Diagnosis and management of dentofacial trauma

Dentofacial trauma is one of the more common injuries especially for the young individuals. It may range from simple to complex. Dental providers are at times the first practitioners that may be called upon for assessment, and possible management of these patients. This talk will review the pertinent anatomy, mechanisms of the injury, and common presentations for such patients. An overview of treatments and indications for referral, if needed, will also be provided.

Dr. Keyvan Abbaszadeh

Dr. Keyvan Abbaszadeh completed his dental training at Tufts University in Boston followed by a general practice residency at Harvard University. He completed his residency in Oral and Maxillofacial Surgery at University of Illinois at Chicago in 1999.

Keyvan is an examiner for the Royal College of Dentists of Canada. He is also a Diplomate of the American Board of Oral and Maxillofacial Surgery. He is an Adjunct Clinical Professor at the Western University.

Keyvan is in private group practice in London, Ontario. His clinical interests are trauma, orthognathic, implant, and dentoalveolar surgery.
