Beyond Osseointegration: Establishing an implant maintenance program to improve implant longevity in your practice

Implant success starts with proper patient selection, surgical and prosthetic risk assessment and prosthetically driven implant placement. Success of implant-supported prosthesis also requires an implant maintenance regimen to monitor and detect peri-implant diseases and conditions.

This lecture will provide a blueprint to help clinicians establish an implant maintenance program and highlight common clinical and radiographic findings that serve as early and late signs of peri-implant disease.

Course Objectives:

1. Define implant success
2. Patient selection and risk assessment prior to implant surgery
3. Review common causes of peri-implant disease
4. Establish implant care protocol in your clinical practice

Sponsored By:

Dr. Siavash Hassanpour

Dr. Hassanpour has a Bachelor of Science in molecular biology and a Master of bone biology. Dr. Hassanpour obtained his Doctor of Dental Surgery degree from the Univ of Toronto in 2014 and immediately entered the Periodontology Speciality program. Here he earned his speciality training and degree in Periodontics and obtained his 2nd Master's degree in innate immunology.

Dr. Hassanpour is now a licensed and a board-certified periodontist and runs a practice limited to Periodontology in North York, Toronto. Dr. Hassanpour is a didactic and part time clinical instructor at the University of Toronto's Graduate and Undergraduate Periodontology clinics. Dr. Hassanpour is currently serving as the past-president of the Toronto

Central Dental Society, is an ODA general council member and is an executive on the Ontario Society of Periodontology.

When not at the office or giving back to the dental community, Dr. Hassanpour enjoys spending time with wife Kelley, 2 and half year-old son Kyan, and 5-months old Chocolate Lab Puppy Charlie. He is an avid golfer and enjoys spending time outdoors.
